

Here's the updated **Python Developer Masterclass** infographic content with **Section 10 removed** and the course ending at **Section 09**.

PYTHON DEVELOPER MASTERCLASS

From Beginner to Professional Developer – Build Real-World Applications with Python

Master Python programming from the fundamentals to advanced software development. Learn to build desktop, web, API, automation, and cloud-ready applications using industry-standard tools, frameworks, and best practices.

Course Roadmap (Beginner → Advanced)

01. Python Fundamentals

- Python Installation & Environment Setup
 - Variables & Data Types
 - Operators & Expressions
 - Input & Output
 - Type Casting
 - Comments & Documentation
 - Basic Programs
 - Coding Best Practices
-

02. Control Flow & Functions

- Conditional Statements
 - Loops (For & While)
 - Functions & Parameters
 - Lambda Functions
 - Recursion
 - Exception Handling
 - Modules & Packages
 - Debugging Basics
-

03. Data Structures & Algorithms

- Strings
 - Lists
 - Tuples
 - Sets
 - Dictionaries
 - List Comprehensions
 - Iterators & Generators
 - Searching & Sorting Algorithms
-

04. Object-Oriented Programming

- Classes & Objects
 - Constructors
 - Encapsulation
 - Inheritance
 - Polymorphism
 - Abstraction
 - Magic Methods
 - Design Principles
-

05. File Handling & Database Programming

- File Operations
 - CSV & JSON Processing
 - XML Parsing
 - SQLite
 - MySQL/PostgreSQL Integration
 - CRUD Operations
 - Transactions
 - Database Best Practices
-

06. Python Libraries & Automation

- OS & Sys Modules
- Pathlib
- Datetime
- Logging
- Regular Expressions
- Requests API

- BeautifulSoup
 - Task Automation
-

07. Web Development with Python

- HTML & CSS Basics
 - Flask Framework
 - Django Framework
 - REST API Development
 - Authentication
 - Sessions & Cookies
 - Template Engines
 - API Testing
-

08. Advanced Python Programming

- Decorators
 - Generators
 - Context Managers
 - Multithreading
 - Multiprocessing
 - Async Programming
 - Memory Management
 - Performance Optimization
-

09. Testing, DevOps & Deployment

- Unit Testing
 - PyTest
 - Code Quality & Linting
 - Git & GitHub
 - Virtual Environments
 - Docker Basics
 - CI/CD Introduction
 - Cloud Deployment
-

Hands-on Projects

- Calculator Application
 - File Management System
 - Student Management System
 - Web Scraper
 - REST API Service
 - Personal Blog (Django)
 - E-Commerce Backend
 - Authentication System
 - Task Management Application
 - Cloud-Deployed Python Project
-

Tools & Technologies

- Python 3.x
 - VS Code
 - PyCharm
 - Jupyter Notebook
 - Git & GitHub
 - Flask
 - Django
 - FastAPI
 - SQLite
 - MySQL
 - PostgreSQL
 - Docker
 - Postman
 - pytest
 - Linux Command Line
-

Career Opportunities

- Python Developer
- Backend Developer
- Software Engineer
- API Developer
- Django Developer
- Flask Developer
- Automation Engineer

- Full-Stack Python Developer
 - Cloud Application Developer
 - DevOps Engineer (Python)
-

★ Course Highlights

-  Beginner to Advanced Curriculum
-  Hands-on Coding Exercises
-  Industry-Standard Development Practices
-  Web & API Development
-  Database Programming
-  Automation & Scripting
-  Testing & Debugging
-  Deployment & DevOps Basics
-  Real-World Portfolio Projects
-  Interview Preparation & Coding Challenges

Tagline

"Learn Python. Build Powerful Applications. Launch Your Developer Career."
